Summary of changes in Version 3

The **main** changes compared with Version 2.2 are:

- § The tagging of the data is now XML (WIPO ST.36) compliant compared to SGML (WIPO ST.32)
- § Every tag has an end tag
- § Some tags are now in lower case eg. <adr>, <city>, <date>
- § All attributes are in lower case and the values are in quotes
- § There are no “floating” tags:
 -
 is replaced by UTF-8 code 000D – carriage return)
 - <BCHG> and <ECHG> replaced by a new way of indicating changes - see <B002EP> below
- § The new IPC standard is introduced (WIPO ST.8)
- § The character encoding is now Unicode/UTF-8

Note: 99% of B tags remain the same as in the previous SGML file.

Current users should have few problems converting their systems to these new files. Particular attention should be given to:

- Unicode/UTF-8 encoding – most systems can do this change automatically – the **rendering** (font) of the encoding is left to the user; for example Microsoft Windows users could use Arial Unicode MS
- The way changes are marked up in the new files
- The new IPC coding.

Summary of changes in Version 3.1

- § <B510> and <B510EP> details have been updated.

§ **WIPO ST.35 will not be used for XML data delivery**

§ **Data delivery will only be possible via the EBD website**

§ WIPO ST.32 (SGML) and WIPO ST.35 formats will continue to be published on the website into 2008 but users should switch to the XML format **which has been the official EPO data from week 1, 2006.**

Summary of changes in Version 3.2

These changes are made due to the introduction of EPC 2000 articles and rules into the EPO systems starting on 13 December 2007 (see:

<http://www.epo.org/patents/law/legislative-initiatives/epc2000.html>). In many cases the actual use of the new articles and rules by applicants is unknown - it may be many months and/or years before this new data ever appears in the EBD files but, of course, we must be ready before then to process the data.

For PHASE 2: ep-bulletin.dtd ver 1.1

the following changes have been made:

- § version number of DTD changes
- § added sequence attribute to root element
- § added B075EP + sub-tags - for petition for review
- § added B090EP + sub-tags - for limitation request
- § added B690 + sub-tags - for previously filed application

Summary of changes in Version 3.21

- § removed B690 + sub-tags - previously filed application - from this document. It is still in the DTDs listed above but WILL NOT BE USED (on the advice of WIPO). In PHASE 3 of EPC2000 it will be introduced as, probably, <B270>, but this has to be cleared by WIPO; once it is agreed by WIPO we will issue new DTDs which will also contain other EPC2000 tags.

Summary of changes in Version 3.22

- § Added EPC 2000 new Article and Rule numbers in place of old equivalents eg. Art. 158(3) becomes 153(4). (Annex II of EPC 2000 has a cross-reference list).
- § Corrected
`<!ELEMENT B0900EP (B091EP+) > to <!ELEMENT B0900EP (B091EP) >`
(DTD is OK on this point)
- § Clarified values at <B0756EP>
- § Various tidying up of text layout
- § Note that examples may still have the older DTD version number

Summary of changes in Version 3.23

This document covers the changes for Phase 3 a) and b) - which will occur at different times during 2008:

Phase	What	Publ. run	Publ. week
Phase 3 a) Datimtex v1.5	- added: <code><!ELEMENT B012EP (B0120EP+)></code> - New revocation procedure - changed: <code><!ELEMENT B0900EP (B091EP+, B092EP?,B093EP?)></code> - Limitation procedure - added: <code><!ELEMENT B270 (dnum,date,ctry,kind?,dtxxt*) ></code> - Previously filed application - Changed DTD version number to 1-3 (note: examples may have older version numbers)	2008-04-18	2008-21 (21.05.2008)
Phase 3 b) Datimtex v1.6	- added: details for B3 publications - added: <code><!ELEMENT B453EP (B4530EP+)></code> Limitation decision - changed, added attribute <code><!ELEMENT B132EP (#PCDATA)></code> <code><!ATTLIST B132EP sequence CDATA #IMPLIED ></code> - added at <code><B121EP></code> Descriptive text for B2 and B3 documents - changed root element attribute values for id and/or file for ep-bulletin.dtd and ep- patent-document.dtd	2008-06-20	2008-30 (23.07.2008)

Summary of changes in Version 3.24

- There have been no new elements or attributes added or changed.
- An additional attribute value has been added to the **comments** of tag `<B245EP>` - added value "7" = Bankruptcy of the file representative (Rule 142(1)c)
- The version number has changed to keep pace with ep-patent-document.dtd where there have been changes (these changes do not affect the abstract)

Summary of changes in Version 3.24.1

On page 26, changed B730 to B731, grantee data.

Summary of changes in Version 3.24.2

Add Montenegro (ME) & San Marino (SM) in B001EP tag

Summary of changes in Version 3.25

- Define B565 tag which will contain the date of completion of search report
- Define tags for the Validation states B848EP & B849EP

Introduction

1. What are EBD files? EBD stands for EPO Bibliographic Data (it could also be EP Bulletin Data); the files consist of EPO patent data marked up using XML tags; the data gives details of all newly published applications and patents and recent changes to previously published patents. For example, the data includes details of date of filing, titles, applicant data, classification, priority data, etc. These are fairly complex files which require a good understanding of EPO patent procedures.
2. This document describes the format for bibliographic data used for:
 - the EP Bulletin (see: <http://bulletin.european-patent-office.org/>)
 - The EBD website (see <http://www.epo.org/searching/free/ebd.html>)
 - EPO patent publications – the title page (see: <https://publications.european-patent-office.org/PublicationServer/search.jsp>) and
 - EPO bibliographic data exchange.

The mark up of the data conforms to WIPO Standard ST.36 (see <http://www.wipo.int/scit/en/standards/standards.htm>)

3. The format provides for a system independent data format, using XML. (Note that the full text and images of all EP A and B documents are also available in ST.36 (XML) format).
4. The EBD files are available at: <http://www.epo.org/searching/free/ebd.html> **Check the website for the latest updates – including changes to this document.**
5. The application of the standard for bibliographic data processing is described below. As stated, it should be noted that these files contain fairly complex data and a good knowledge of EPO patent rules and formalities is required to make full use of the data, which includes a careful study of this document.
6. The XML Document Type Definition - DTD - ep-bulletin.dtd - can be found on the EBD website under "**Documentation**"
7. Note: not all data elements in ST.36 and the ep-bulletin.dtd are used by the EPO; only the ones used are described in this document.

Data description

1. The bibliographic data described below includes all the information according to Rule 143 of the EPC (European Patent Convention, 13th edition; previously Rule 92). That is:

Rule 143 - Entries in the Register of European Patents

(1) The Register of European Patents shall contain the following entries:

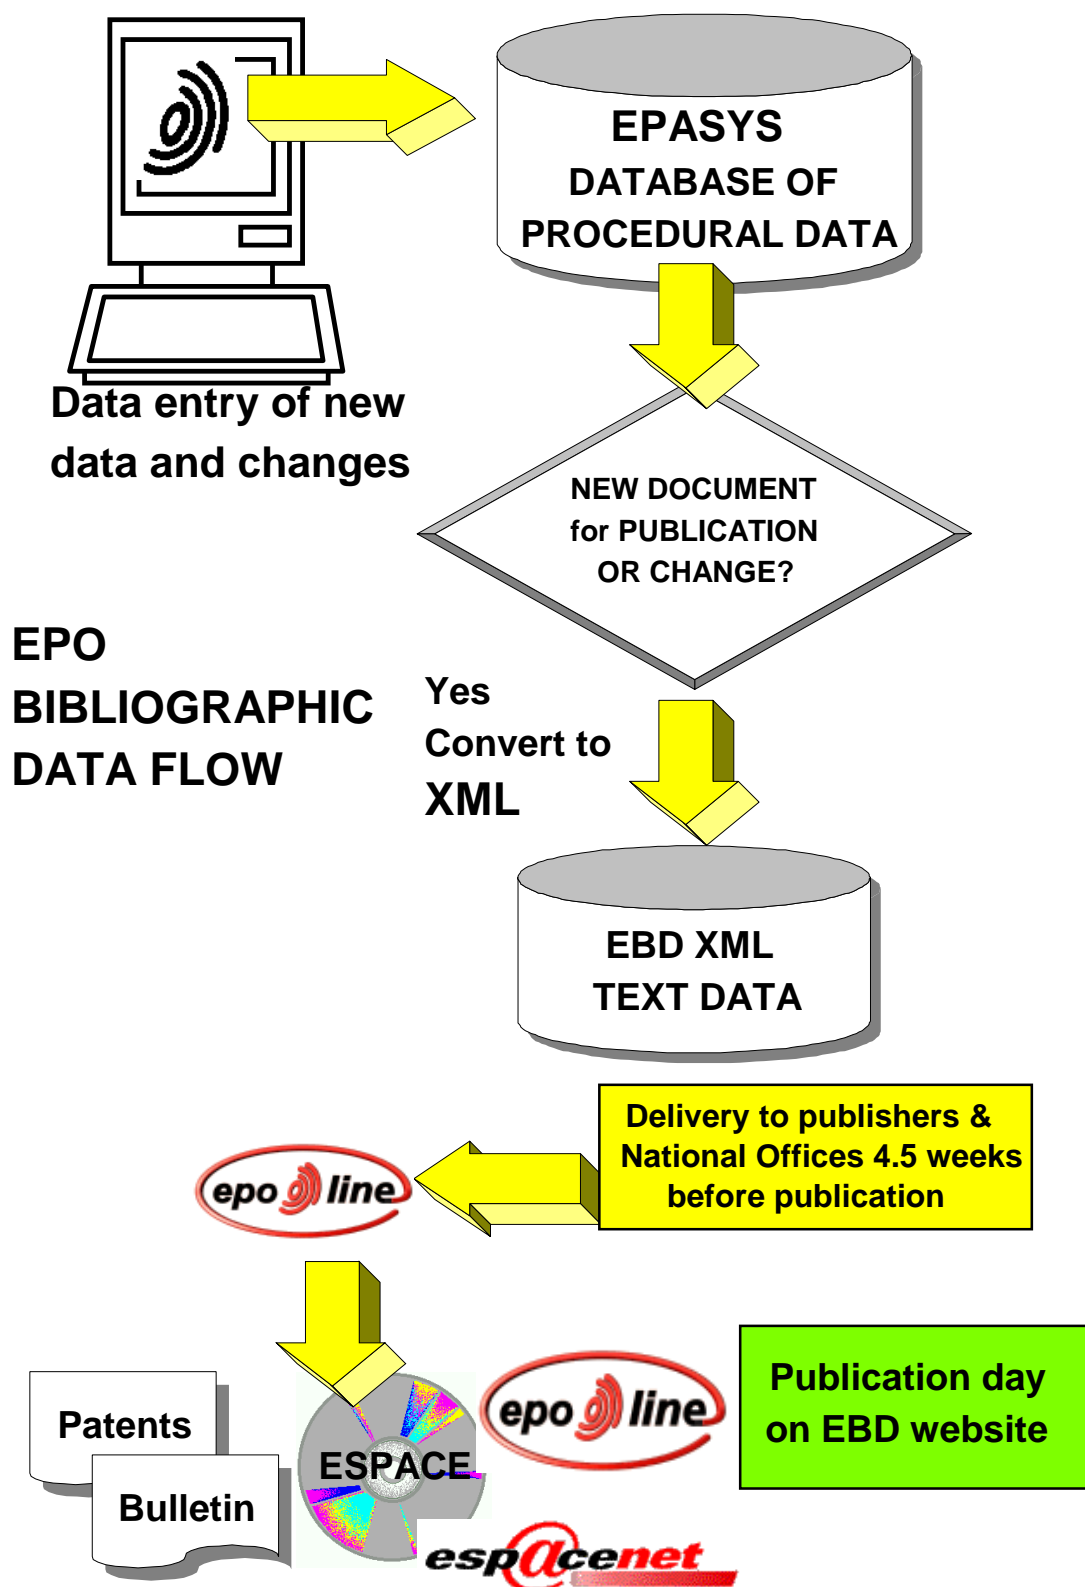

- (a) number of the European patent application;
- (b) date of filing of the application;
- (c) title of the invention;
- (d) classification symbols assigned to the application;
- (e) the Contracting States designated;
- (f) particulars of the applicant for or proprietor of the patent as provided in Rule 41, paragraph 2(c);
- (g) family name, given names and address of the inventor designated by the applicant for or proprietor of the patent, unless he has waived his right to be mentioned under Rule 20, paragraph 1;
- (h) particulars of the representative of the applicant for or proprietor of the patent as provided in Rule 41, paragraph 2(d); in the case of several representatives only the particulars of the representative first named, followed by the words "and others" and, in the case of an association referred to in Rule 152, paragraph 11, only the name and address of the association;
- (i) priority data (date, State and file number of the previous application);
- (j) in the event of a division of the application, the numbers of all the divisional applications;
- (k) in the case of a divisional application or a new application under Article 61, paragraph 1(b), the information referred to in sub-paragraphs (a), (b) and (i) with regard to the earlier application;
- (l) date of publication of the application and, where appropriate, date of the separate publication of the European search report;
- (m) date of filing of the request for examination;
- (n) date on which the application is refused, withdrawn or deemed to be withdrawn;
- (o) date of publication of the mention of the grant of the European patent;
- (p) date of lapse of the European patent in a Contracting State during the opposition period and, where appropriate, pending a final decision on opposition;
- (q) date of filing opposition;

- (r) date and purport of the decision on opposition;
- (s) dates of stay and resumption of proceedings in the cases referred to in Rules 14 and 78;
- (t) dates of interruption and resumption of proceedings in the case referred to in Rule 142;
- (u) date of re-establishment of rights provided that an entry has been made in accordance with sub-paragraph (n) or sub-paragraph (r);
- (v) the filing of a request for conversion under Article 135, paragraph 3;;
- (w) rights and transfer of such rights relating to an application or a European patent where these Implementing Regulations provide that they shall be recorded.
- (x) date and purport of the decision on the request for limitation or revocation of the European patent;
- (y) date and purport of the decision of the Enlarged Board of Appeal on the petition for review.

2. This information allows users to keep European Patent Register information up-to-date. For details about the EPO Patent Register see: www.epo.org and click on the **European Patent Register link**. The big differences between the Register and EBD files are:
 - 2.1 The register provides complete historical data for a patent file plus other information not included in Rule 143. The EBD covers one publication week and all new and changed data during that week.
 - 2.2 The EBD provides bulk data (for a publication week only) which can be downloaded for database updates etc. The Register deals with individual files only.
3. It must be stressed that this format will be used only for EP publication data and not necessarily, for example, from other EPO systems such as DOCDB and EPOQUE.
4. All data in the EBD format is extracted from the EPO's EPASYS database - a database which contains all procedural data regarding European patent documents. EPASYS data input is the responsibility of many EPO staff (examiners and formalities officers) with many thousands of transactions taking place per day. No new data content is added during the conversion to the EBD format (except XML tags) - we can only process what is in the EPASYS database. If there is a mistake in EPASYS, for example, there will be a mistake in the EBD data.
5. Once per week there is a so called 'publication run' which extracts from EPASYS the data required for the publication of EP A and B publications, the EP Bulletin and for data exchange purposes. It is at this time that the bibliographic data file is created. Therefore, the data is a 'photograph' of all the previous weeks additions, changes, etc. in EPASYS.
6. It should be noted that the EBD file is not a cumulative record of all the changes which may have been made to a file (for this users should refer to the Register of European Patents (see above) - it is a 'snap shot' of only those changes which occurred in a particular publication week. In addition there is a clear distinction between A and B publications (separate files) since these are separate documents for publication purposes - therefore, the B file is not an update of the A file; it is a file

in its own right (extracted from EPASYS) - although, of course, much of the data may be the same in both files.

Overview of bibliographic data flow

In terms of volume and size of data the average weekly bibliographic data for 2014 was :

New (first) EP publications:

A1 and A2	:	1400 Docs
A3	:	360 Docs
B1	:	1052 Docs
B2	:	15 Docs

Euro PCT : 2485 Docs

Changed EP publications:

A1 and A2	:	11400 Docs
B1 and B2	:	6400 Docs

WIPO publications:

WIPO 2(A1)	:	3680 Docs
WIPO 2(A2)	:	400 Docs

Note: when stored all these files will be 'zipped' to create a zip file with a size varying from 5 to 50MB, containing two files: one for all A publications and one for all B publications - these will extract to, say, 35 and 350 MB respectively in 2014.

7. When extracting the data from EPASYS we have split the job into the following parts:

7.1 A1 and A2: EP patent applications and Euro-PCT's (Art. 153(4)) which have not been published in one of the three EPO languages.

These are listed in the EP Bulletin in Section I.1(2)

7.2 A3: EP patent applications (Title page plus search report)

These are listed in the EP Bulletin in Section I.1(3)

7.3 B1: EP patent specifications

These are listed in the EP Bulletin in Section II.1(1)

7.4 B2: NEW EUROPEAN PATENT SPECIFICATION
NEUE EUROPÄISCHE PATENTSCHRIFT
NOUVEAU FASCICULE DE BREVET EUROPEEN

to be followed with a new second line indicating B2

'After Opposition procedure'

'Nach dem Einspruchsverfahren'

'Après la procédure d'opposition'

These are listed in the EP Bulletin in Section II.1(2)

7.5 B3: NEW EUROPEAN PATENT SPECIFICATION
NEUE EUROPÄISCHE PATENTSCHRIFT
NOUVEAU FASCICULE DE BREVET EUROPEEN

to be followed with a second line indicating a B3

'After limitation procedure (B3-1)'

'Nach dem Beschränkungsverfahren (B3-1)'

'Après la procédure de limitation (B3-1)'.

These are listed in the EP Bulletin in Section II.1(3)

7.6 Euro-PCT applications:

International applications which have entered the European phase (Art 153(1)). These are listed in the EP Bulletin in Section I.1(1) which contains all Euro-PCT applications for which the EPO has not printed the A-document. To identify these applications in the Bulletin Section I.1(1), an asterisk '*' is printed next to the publication number.

7.7 International applications not entering the European phase.

These are listed in the EP Bulletin in Section I.2 which contains all international applications which have not paid the fees in due time and therefore are not entering the European phase.

7.8 A-patent application changes

These are listed in the EP Bulletin in Section I.12

7.9 B-patent specification changes

These are listed in the EP Bulletin in Section II.12

8. The new EP publications:

A1, A2 and A3: EP patent applications
B1, B2 and B3: EP patent specifications

need little explanation - these are the documents coded as "ready for publication" 4.5 weeks before the publication. Therefore, for example, the EPO publication contractors will use this data, together with data previously captured by them, eg. description and drawings, to create and print the final patent documents for that week.

9. Changed EP documents:

These need more explanation - especially on the size of the two files: generally over 10 MB altogether.

In the EP Bulletin only brief details are given of changes to published documents. The most common changes, for A documents, for example, are shown in Section I.7: "Date of filing of request for examination", with the following format:

(11) 0 851 243 13.10.1999

In the XML file ALL the data for this publication would be given.

Table of tags

These tables do **not** include all bibliographic tags listed in WIPO ST.36 and in the DTD; only those required for the Bulletin-EBD format. The table is followed by a detailed description of each tag and example mark up.

Key to column headers:

INID: an acronym for “Internationally agreed Numbers for the Identification of (bibliographic) Data.”): a list of approximately 60 distinct bibliographic data widely used on the first page of patent documents or in Patent Gazettes. (See WIPO ST.9)

Item description and general considerations

1. Dates are stored in 8 bytes. The format is always yyyyymmdd. The date is preceded by the <date> tag.
2. The issue number of the Bulletin is stored in 6 bytes in. The format is yyyynn. The issue number is preceded by the <bnum> tag
3. The values used for country, state or language code fields are according to the Standard ISO/R 639-1967(F). The country code is preceded by the <ctry> tag and is always in UPPER case.
4. All elements are closed by an end tag i.e. the 'start tag' with a slash character </...>.

Example:

```
<B110> ... data ... </B110>  
<B450><date>20050420</date><bnum>200516</bnum> </B450>
```

5. A few characters, according to the XML standard, are coded as character entity references:

& : &	- ampersand (the most common)
> : >	- greater than
< : <	- less than

Example:

J.A. Kemp & Co. = J.A. Kemp & Co.

6. Euro-PCT applications

WIPO sends application data to the EPO. Later on these applications will be split into:

- Applications **not entering** the European phase because the application is deemed to be withdrawn. These are printed in the Bulletin in "Section I.2".
- Applications **entering** the European phase (Euro-PCT). But there are two categories:
 - A. Applications for which EPO **does print** the A-document. Currently EPO prints, after translation, applications which were filed in Russian, Japanese, Spanish and Chinese. These are printed in the Bulletin in Section I.1(2) together with the EP documents.
 - B. Applications for which EPO **does not print** the A-document because the application was filed in one of the three official languages of the EPO (English, French or German).

These are printed in the Bulletin in "Section I.1(1)".

However, if the file goes forward for substantive examination, etc, the EPO may print the Patent Specification (B-document).

The usage and contents of ep-bulletin (country, doc-number), B110, B190, B003EP and B006EP tags for the cases above is shown in the table below.

Situation	country	Doc-number	B110	B190	B003EP	B006EP

WIPO publications with no EPO publication nr. and which are NOT entering the European phase . These applications are printed in the EPO Bulletin "Section I.2". Note: Tag <B237> contains the date when the application is deemed to be withdrawn.	WO	WIPO publ nr	WIPO publ nr	WO	Not used	9121
WIPO publications entering the European phase , (EURO PCT) and the EPO prints the A-document. These applications are printed in the EPO Bulletin "Section I.1(2)"	EP	EPO publ number	EPO publ number	EP	Not used	Not used

Kinds of EP patent documents

1. A1/A2 new publication

ep-bulletin ... kind= A1 or A2
status=n

Example:

```
<ep-bulletin id="EP1024184A1" file="00100234.4" lang="de"
country="EP" doc-number="1024184" kind="A1" date-publ="20050105"

<B130>A2</B130>
```

```
<B430>
  <date>20050105</date>
  <bnum>200501</bnum>
</B430>
```

2. A1/A2 publication deleted

ep-bulletin kind=A1 or A2
status=r

B110 marked as deleted status=d ie. Publication is deleted

B130 marked as changed status=r

B430 marked as deleted status=d

Example:

```
<ep-bulletin id="EP1510131A1" file="03077683.5" lang="en"
country="EP" doc-number="1510131" kind="A1" date-publ="20050105"

Notes:

- § Kind B3 is the first EPO patent publication which has the possibility of one or more occurrences of the original kind code (leaving aside corrected patents)
- § For this reason we have added to the kind code (B3) in the id attribute a sequence number - "B31", "B32", etc - otherwise the id would not be unique.
- § We have also added the "sequence" attribute to the root element.

Corrections

1. Printed EP patent applications and patent specifications which have failed to pass the in-house quality assurance inspection, or are reported to be in error by external agencies, are subjected to a corrections procedure. It is estimated that, on average, twenty documents per week are subjected to this procedure, about 0.5% of the total published documents. These documents have the following kind codes:

A8 Correction - reprint of the title page of an A-document
A9 Correction - complete reprint of an A-document

B8 Correction - reprint of the title page of a B-document
B9 Correction - complete reprint of a B-document
2. Therefore, based on a specification which is in accordance with WIPO ST.50: *Guidelines for Issuing corrections, alterations and supplements relating to patent information*, the EPO have implemented an automated corrections procedure.
3. The objectives of the procedure are: to have a centralised registration of documents requiring correction, to include the corrected documents in the weekly delivery of documents to the publishers and the subsequent dissemination of the corrected documents to external agencies.
4. The central registration is by means of a special coding (CORR) carried out by EPO staff in the European Patent Administration (EPASYS) database. This coding consists of 'correction items' which detail the corrections being made and possible re-publication to be done.
5. The EBD file contains additional information concerning the corrections being made. These are specified in more detail below.

XML elements: detailed description**<ep-bulletin>: ep-bulletin**

The following attributes are used in this order: -

Id=	The country code, application number and the kind code
file=	Application number with check digit
lang=	Language of publication code "en", "fr" or "de"
country=	Publishing country or organisation – EP or WO
doc-num=	Number of the document, (EPO or WIPO publication number). Same value as <B110>
kind=	Kind of document. Same value as <B130>. unless <B130> has a coding.
correction-code=	Correction code according to WIPO ST.50, eg. W1
date-publ=	Document date of publication. Format is yyyyymmdd
status=	Status of the application. The current values used are: n : New publication e.g. A1, A2, B1, B2 or B3 published for the first time. r : Replacement of data for an application already published. d : Deletion of an application already published (not used to date) c : Correction
sequence=	Sequence number - only used (so far) for kind B3 (EPC2000)
dtd-version=	The version number of the Document Type Definition

Note: each file starts with:

```
<?xml version="1.0" encoding="UTF-8" ?>
<!DOCTYPE ep-bulletin PUBLIC "-//EPO//EP BULLETIN 1.1//EN" "ep-bulletin-
v1-1.dtd">
```

This prologue and declaration are required for XML files. Each file (document instance) starts with these two lines and `<ep-bulletin . . . >` and ends with `</ep-bulletin>`

The basic structure of the DTD is as follows (? = optional):

Note: when the file is merged with the full text of the patent document then we use a different DTD: `ep-patent-document.dtd`; however, all the data elements found in `<SDOI>` remain exactly the same. The basic structure of this DTD is as follows:

In the model above EITHER `<bibliographic-data>` OR `<SDOI>` may be used; for the EPO publication system and files we will stick to `<SDOI>` for the foreseeable future since many other systems and clients use this format. It is intended that there should be a one-to-one relationship between the elements in both models.

<SDOBI>: Sub-DOCUMENT for Bibliographic data

This tag is kept for backward compatibility with old SGML files; for this reason it is also kept in the main publication DTD: ep-patent-document – see above.

Attribute:

lang= Publication language. Same value as <B260>.

Example:

```
<SDOBI lang="en">
```

<B000>: Office specific system/file information**<eptags>: EPO specific tags**

Again, kept for backward compatibility and to avoid unnecessary changes. Under ST.36 rules this should really be: <ep-tags> or the like. Tags within this group may be changed at the discretion of the EPO.

<B001EP>: Selective mask for states involved

Mask for a selection on a particular state involved either by designation or extension. It contains all the states involved in the previously published situation as well as the current situation.

Every state has a fixed position within the mask reflecting the country code if the state has been mentioned, otherwise, if not present, it contains two dots.

* = "Extension states", also recognise European patent applications and patents on their territory.

Note: The states codes stored in this tag are not necessarily the same state codes as in tag <B840> 'Designated contracting states'; eg. when a state has been deleted, the tag <B840> contains the new situation of the Designated contracting states, however tag <B001EP> still contains the states codes from the previous publication week.

Example (all current states, 2008):

```

<B002EP>: Changed tags

This is a "container" for indicating all changes within a file; it contains the tags:

<ep-chg-info> and <ep-chg>

a) <ep-chg-info>

Container for:

b) <ep-chg>

This tag gives the details of where in the file (which Bnnn tag) changes have been made; it has the following attributes giving details of the change:

Attributes:

idref = reference to the id of the Bnnn tag changed
btag = the actual tag where data has changed eg. B240
date = date of the change
status = type of change, the vaules for the EPO are:
n = new data, inserted data
r = replacement data
d = deleted data

Examples:

```
<B002EP>
  <ep-chg-info>
    <ep-chg idref="ep-chg0001" btag="B542" date="20041118"
status="r"/>
    <ep-chg idref="ep-chg0002" btag="B542" date="20041118"
status="r"/>
    <ep-chg idref="ep-chg0003" btag="B542" date="20041118"
status="r"/>
  </ep-chg-info>
</B002EP>
```

In this example the title has been replaced in the three languages:

```
<B540>
  <B541>de</B541>
  <B542 id="ep-chg0001">Verfahren zum Aufschäumen eines metallischen

<ep-chg> is recursive to allow for history of changes - changes to changes - possibly to be used in the EP register; recursion will **not** be used in the EBD.

<B003EP>: Indicator 'no A-document published by EPO'

This field contains an '*' (asterisk) for the EURO-PCT applications for which **no** A-document has been published by the EPO because it was filed with WIPO in one of the official languages of the EPO.

<B004EP>: Re-establishment of rights indicator

It contains the code of the decision after a request for re-establishment of rights.

The values used by the EPO are:

- 2 : Request not accepted
- 3 : Request accepted

Note: Used together with <B238>.

<B005EP>: Printer/Producer identification

<B006EP>: Indicator for international applications

This tag identifies the type of International applications. The values used by the EPO are:

- 9120 : Entering the European phase
- 9121 : Not Entering the European phase

```
<B006EP>9120</B006EP>

<B007EP>: Reserved for EPO internal use

This tag is reserved for EPO internal use.

<B008EP>: Indicator for "small changes"

This tag identifies "small changes" which are not printed in the EPO Bulletin such as removing the country code in the postcode. Currently and when present it contains the value 8.

<B009EP>: Text from B725EP tag in the three EPO official languages

This tag will contain the text stored in tag <B725EP> in EPO official languages ie. German, English and French to print in the EPO Bulletin. See Tag <B720>.

The text language order is German, English and French.

Example:

```

<B012EP>: New revocation procedure (Art 105a)

EPC 2000 Phase 3 a) change

EPC Article 105a - Request for limitation or revocation

(1) At the request of the proprietor, the European patent may be revoked or be limited by an amendment of the claims. The request shall be filed with the European Patent Office in accordance with the Implementing Regulations. It shall not be deemed to have been filed until the limitation or revocation fee has been paid.

(2) The request may not be filed while opposition proceedings in respect of the European patent are pending.

1. This form of revocation is always from the proprietor. (Note: Revocation within the existing opposition procedure may also be on request from the proprietor). This new procedure caters for revocation from the proprietor outside of the opposition procedure.

Both the request for Revocation 105a and the revocation itself are published in the Bulletin.

2. Note that the final result can only be a positive decision to actually revoke the patent.

<B090EP>: Limitation procedure

EPC 2000 Phase 2 and 3 a)

Under EPC 2000, the proprietor of the patent can request a limitation of the scope of the patent (claims). They can do this more than once. The request can be made during the opposition period as well as after it.

EPC Article 105a - Request for limitation or revocation

(1) At the request of the proprietor, the European patent may be revoked or be limited by an amendment of the claims. The request shall be filed with the European Patent Office in accordance with the Implementing Regulations. It shall not be deemed to have been filed until the limitation or revocation fee has been paid.

(2) The request may not be filed while opposition proceedings in respect of the European patent are pending.

Note: In the EPO the description and drawings may also change as well as the claims.

WO WIPO

<B200>: Domestic filing data**<B210>: Application number**

Number assigned by the EPO or National Office when the application is first filed. The number is stored as eight digits plus a check code 'YYXXNNNN.P' where:

YY = Year of application

Note: From 2000 it is 00, 01, etc care should be taken with any sort programs based on this number.

XX = Place of application; that is:

NNNN = Number

P = Check digit : calculated according to Modulus 10 - calculations detect single transpositions and incorrect keying of a single digit. The calculation is performed as follows:

The units position and every alternate position of the basic number is multiplied by 2. The digits resulting from the multiplication are added to those that were not multiplied. The total is subtracted from the next higher number ending with zero. The result is the check digit.

EP application number : 03789660.2

0	3	7	8	9	6	6	0	(base)
x	x	x	x	x	x	x	x	(multiply)
1	2	1	2	1	2	1	2	(by)

0	6	7	16	9	12	6	0
---	---	---	----	---	----	---	---

Add every digit separately (i.e. 16 has to be added as 1+6):

$0 + 6 + 7 + 1 + 6 + 9 + 1 + 2 + 6 + 0 = 38$

Divide $38 : 10 = 3$ and the remainder is 8

Subtract $10 - 8 = 2$ check digit

<B245EP>: Suspension/Interruption indicator

Indicates the type of suspension or Interruption. The values used by EPO are, according to EPC rules (old EPC: Rules 13 and 90):

- 1 Suspension (Rule 14)
- 2 Applicant died (Rule 142(1)(a))
- 3 Legal incapacity of applicant (Rule 142(1)(a))
- 4 Legal prevention (Rule 142(1)(b))
- 5 Representative died (Rule 142(1)(c))
- 6 Legal incapacity of representative (Rule 142(1)(c))
- 7 Bankruptcy of the file representative (Rule 142(1)(c))

<B270>: Previously filed application

EPC 2000 Phase 3 a)

This relates to new INID code (27) under WIPO ST.9; where the provisional wording is:

Reference to a previously filed application for the purposes of obtaining a filing date under the Patent Law Treaty (PLT) Article 5(7).

which states:

(7) [Replacing Description and Drawings by Reference to a Previously Filed Application]

(a) Subject to the requirements prescribed in the Regulations, a reference, made upon the filing of the application, in a language accepted by the Office, to a previously filed application shall, for the purposes of the filing date of the application, replace the description and any drawings.

(b) Where the requirements referred to in subparagraph (a) are not complied with, the application may be deemed not to have been filed. Where the application is deemed not to have been filed, the Office shall notify the applicant accordingly, indicating the reasons therefor.

EPO definition from requirements: The applicant may file "by reference to a previously filed application". This means, rather than filing the text of a new EP application, the applicant refers to the description, any drawings, and potentially claims of that previously filed application. Such reference to date/state/number of the previously filed application is enough for obtaining a date of filing for the new EP application. The applicant then has two months from the date of filing for filing the actual text of that EP application, in the form of a certified copy of the earlier application. If not filed, it may still be filed within two months from an EPO invitation (is dispensed with in cases where the previously filed application is available to the EPO). Otherwise the application will not be dealt with as a European patent application. The bibliography of the previously filed application (like its date of filing, any priority claim etc.) is of no relevance to the new EP application, nor is its date of filing taken as the basis for the calculation of time limits (unless this previously filed application is also claimed as a priority, which is possible, and will continue to be recorded as such).

EPC Rule 40 - Date of Filing:

(1) (c) a description or reference to a previously filed application.

(2) A reference to a previously filed application under paragraph 1(c) shall state the filing date and number of that application and the Office with which it was filed. Such reference shall indicate that it replaces the description and any drawings.

<B300>, <B310>, <B320>, <B330>: Priority data

(30) Data relating to priority under the Paris Convention

(31) Number(s) assigned to priority application(s)

(32) Date(s) of filing of priority application(s)

(33) WIPO Standard ST.3 code identifying the national industrial property office allotting the priority application number or the organization allotting the regional priority application number; for international applications filed under the PCT, the code "WO" is to be used

filed</ctry>
  </B330>
</B300>

```

- For a PCT priority the tag <B330> contains the code WO and the format of the priority number, <B310>, is PCT/xxyy/n where:

```

xx    Original country
yy    Year
n     Variable length priority number

```

- There is no tag to mark the beginning of the repeatable group for tags <B310>, <B320> and <B330>. However these tags are always presented in the same sequence.
- In respect to year 2000 compliance the EPO generally relies on the priority number - <B310> - given by the issuing office which may or may not be year 2000 compliant.

<B453EP>: Limitation decision**EPC 2000 Phase 3 b)**

For publication (and XML placement): existing INID code (45) will be used with the title: "Date of publication and mention of the limitation decision:"

XML/DTD:

```
<!ELEMENT B453EP (B4530EP+) >
  <!ELEMENT B4530EP (kind,date,bnum) >

            id ID #IMPLIED
            sequence CDATA #IMPLIED
            limitation-sequence CDATA #IMPLIED >
```

Note: limitation-sequence relates to the number in <B090EP>.

Example:

```
<B453EP>
  <!-- First B3 -->
  <B4530EP id="ep-chg0001" sequence="1" limitation-sequence="1">

In the EBD file this data can take two formats, depending on the time the record was created, for the back file there is, generally, no change tag,

Example:

```
<B472>
  <B475>
    <date>20030805</date>
    <ctry>AT</ctry>
    <date>20030831</date>

IMPORTANT NOTES:

- There is no "edition" 8 in the new WIPO ST.8; therefore we will not have, for example, Int. CL.8 printed on the title page of EP patents, but for consistency with current (pre-2006) processing we will keep this number, for all practical purposes it is 8 and indicated as such to EPO examiners in the guide to the new IPC.
- Tag B510 will be used to store the IPC coding until the publication week 52-2005. From publication week 01-2006, we will only use tag **B510EP** for the new (IPCR) coding (see details in the following pages).
- Back file data will NOT be changed to B510EP because it is published data in the public domain

<B510EP>: International Patent Classification (IPCR – in force 01-2006)

The new WIPO ST.8 standard (see: <http://www.wipo.int/scit/en/standards/pdf/03-08-01.pdf>) states:

Industrial property offices are asked to implement this new version of Standard ST.8 for all patent documents with a publication date from January 1, 2006, onwards. For patent documents published prior to that date, the previous version of the Standard should continue to be used.

This recording convention provides that symbols of the International Patent Classification (IPC) should be presented on machine-readable records for the exchange of information in machine-readable form in a fixed-length field in 50 positions, each part of the Int. Cl. symbol being recorded in specific positions and in the manner prescribed.

...
A schematic representation of the contents of the 50 positions is as follows:

Section	Class			Subclass	Main Group				Separating character	Subgroup						Blanks			
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	

Version indicator								Classification level	First or later position of a symbol	Classification value	Action date							
20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38

Original or reclassified data	Source of classification data	Generating office		Blanks							
39	40	41	42	43	44	45	46	47	48	49	50

As can be seen from the section of the DTD printed below each part has been assigned an element name; for example: <generating-office>

```
<!ELEMENT B510EP (classification-ipcr+)>
```

<B510EP> contains <classification-ipcr> which in turns contains all the new tags for each part of the classification **or** it can be stored in a fixed length field of 50 positions within the <text> data element.

```
<!ELEMENT classification-ipcr ((section , class , subclass , main-group?
, subgroup? , ipc-version-indicator , classification-level? , symbol-
position? , classification-value? , action-date? , classification-status?
, classification-data-source?, generating-office?) | text)>
```

This can also be represented by the following table:

Position(s)	Content	Values	ST.36 (XML)
1	Section	A-H	<section>
23	Class	01...99	<class>
4	Subclass	A...Z	<subclass>
5 to 8	Main Group (right aligned)	1...9999, blank	<main-group>
9	Separating character	/ ("Slash")	
10 to 15	Subgroup (left aligned)	00...999999 blank	<subgroup>
16 to 19	For future use	4 blanks	
20 to 27	Version indicator	YYYYMMDD date format	<ipc-version- indicator>
28	Classification level	C, A, S	<classification-level>
29	First or later position of symbol	F, L	<symbol-position>
30	Classification value (inventive or non-inventive)	I, N	<classification-value>
31 to 38	Action date	YYYYMMDD date format	<action-date> <date>
39	Original or reclassified data	BRVD	<classification- status>
40	Source of classification data	H M G	<classification-data- source>
41-42	Generating office	AA ZZ (ST.3)	<generating-office> <country>
43-50	For future use	8 blanks	

To mark up this data with each part coded is very heavy mark up; for example:

```
<B510EP>
  <classification-ipcr sequence="1">
    <section>C</section>
    <class>22</class>
    <subclass>C</subclass>
    <main-group>1</main-group>
    <subgroup>02</subgroup>
    <ipc-version-indicator>20050101</ipc-version-indicator>
    <classification-level>A</classification-level>
    <symbol-position>F</symbol-position>
    <classification-value>I</classification-value>
    <action-date>20050105</action-date>
    <classification-status>B</classification-status>
    <classification-data-source>H</classification-data-source>
    <generating-office>EP</generating-office>
  </classification-ipcr>
</B510EP>
```

This is for **one** classification of, on average, 2 or 3 classifications for an EP document. We will, therefore, capture the new IPC as **one fixed length field of 50 positions** conforming to the new IPC (see above); for example (this example taken from WIPO ST.8):

```
<B510EP>
  <classification-ipcr sequence="1">
    <text>B28B 5/00 20060101AFI20070601BHEP </text>
  </classification-ipcr>
</B510EP>
```

Because the field is always fixed length rendering for display, page layout etc. should be straightforward.

Before contacting the EPO about the meaning and interpretation of the new IPC please refer to the tables above and new WIPO ST.8 (<http://www.wipo.int/scit/en/standards/pdf/03-08-01.pdf>)

Example:

```
<B510EP>
<classification-ipcr sequence="1">
<text>C09D 151/00 20000101AFI20060104BHEP </text>
</classification-ipcr>
<classification-ipcr sequence="2">
<text>C08F 265/06 20000101ALI20060104BHEP </text>
</classification-ipcr>
<classification-ipcr sequence="3">
<text>C09D 5/02 20000101ALI20060104BHEP </text>
</classification-ipcr>
<classification-ipcr sequence="4">
<text>C09D 175/04 20000101ALI20060104BHEP </text>
</classification-ipcr>
</B510EP>
```

Note: the spaces or blanks (which are important) are coded in UTF-8 as 0020 (space).

Corrections and changes to previous publications using earlier versions of the IPC

For several months and, probably, years the EPO will be processing data coded to previous versions (editions) of the IPC - for the front file (01.2006 on) we will use the 50 position IPCR in all cases and positions 20 to 27 - the version indicator date - will contain the date of creation of the IPC as held in the EPO database. This could, of course, be well before 2006.

In some cases it may not be possible to determine the version indicator date because the classification is no longer valid in such cases the value of the version indicator date will be set to eight zeros: 00000000, example:

```
<B510EP>
<classification-ipcr sequence="1">
<text>H05K 1/05 00000000AFI20060104BHEP </text>
</classification-ipcr>
</B510EP>
```

For information:

The publication of the new IPC on the title page of EP patent documents will be similar to the layout below:

Introduction

Many EPO computer systems and projects process data on the EPO's IBM mainframe - one of the code pages on this system is IBM EBCDIC (Extended Binary Coded Decimal Interchange Code) Code Page 500. This is an internationally recognised code page for EBCDIC. As mentioned at the beginning we extract EBD data from the EPASYS system which stores data in Code Page 500:

Code Page 00500

In re-designing the EPO publication system to use XML we decided to convert this code page to Unicode UTF-8 as it is now common for all XML based systems. Unicode has a vast number of characters but for the EBD we need only use those with equivalents in Code page 500.

The following table is a description of each code together with its graphical representation.

Note: for the full text of patent documents we will use many more Unicode characters than those given below.
